Spangler Lane Stormwater Retrofit Stakeholders Meeting

On Tuesday, July 25, 2018, staff held a meeting to discuss the planned capital project on Spangler Lane to retrofit the existing stormwater pond. It included a presentation with information on stormwater pollution and recent State regulations that triggered this project as well as an overview of the construction process and timeline. The two major issues raised by several of the 14 Somerset residents in attendance were the proposed fence height and landscaping. Residents indicated that a four foot fence was not adequate, and that the trees chosen to screen the facility are prone to disease. Another landscaping request was that native grasses be planted to minimize mowing requirements. Public Works will work with the consultant developing the design to address these concerns.
